

Californians and Their Government—March 2022

Full Crosstabs – All Respondents

Methodology Note:

Findings are based on a survey of 1,672 California adult residents, with 64 percent interviewed on cell phone (1,071 interviews) and 36 percent interviewed on landline telephones (601 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. The sample included 781 respondents reached by calling back respondents who had previously completed an interview in PPIC Statewide Surveys in the last six months. Interviews took an average of 20 minutes to complete. Interviewing took place on weekdays and weekday nights from March 6–17, 2022.

The sampling error, taking design effects from weighting into consideration, is ± 4.1 percent at the 95 percent confidence level for the total unweighted sample of 1,672 adults. This means that 95 times out of 100, the results will be within 4.1 percentage points of what they would be if all adults in California were interviewed. The sampling error for unweighted subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org

Note:

For questions related to the gubernatorial recall election and process (Q16-Q20) and midterm elections (Q26-Q28), please refer to the Public Crosstabs–Likely Voters document.
